

HR Partner V1.20

This document describes the changes made to HR Partner V1.20 since previous releases. For more information, please contact our development team at support@blaze.com.au.

New Features

Outlook Integration

HR Partner now supports linking to Microsoft™ Outlook Tasks. Now your reminders are not only within the HR Partner software system, but will appear as soon as you start up Outlook.

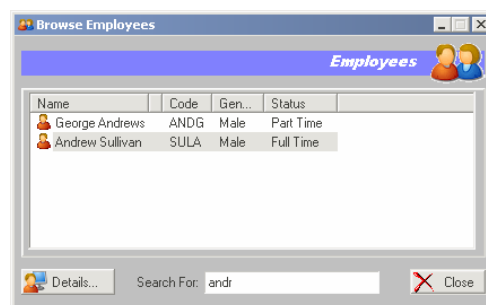

Most submodules in the system now have reminder ability, and the reminders can now be added, changed and deleted (in prior versions, you could only add a new reminder to a new entry). Now you can change reminders on existing entries.

Enhancements

Searching Ability Within Employee Browse

You can now search for an employee name match in the browse screen. The search functionality support partial name searching, allowing you to see a selection of users which closely match a keyword.

In this example, we have keyed in 'andr' as the search phrase. The system will narrow down to all employees who have the string 'andr' within their names (e.g. Andrew).

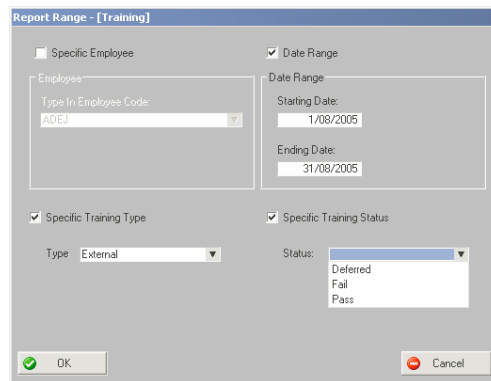

Enhanced File Attachments

HR Partner now has file attachments across nearly all submodules. This allows you to attach any windows file to Notes, Grievances, Position History and most other submodules.

Enhanced Report Options

The reports module now has more power, with added selection drop downs depending on what submodule you are reporting on.

As you can see in this example, when you are printing Training reports, you can also specify the *Training Type* and *Training Status* as additional filters, extending the power of your reports.

Bug Fixes

Fixed: Problem where pressing 'OK' on the Login screen without entering a username gives you full access to the system!

Fixed: Dropdown boxes within the system were not in alphabetic order.

Fixed: Trying to select an employee who doesn't exist in the Attache database anymore resulted in the last employee on the list being selected.
